ABSTRACT

A computer-enabled system, method, and medium is provided to support, e.g., analyzing intellectual property documents by assigning attributes to the documents. The present invention is suitable for use by intellectual property professionals and is flexible to support development and use of customized attribute types and attributes. Optionally, a group of intellectual property documents can be divided into projects, which can be ingested including assigning attributes. Optionally, the attributes can be used to filter information included in e.g., searches, and/or reports.
